

Case Study: Claire House Children's Hospice

Location: Liverpool
Install: Autumn 2018
Product: 3 x S-CB+180 Boilers

Claire House Children's Hospice provides care to seriously and terminally ill children. As part of a refurbishment to facilities Strebel was asked to recommend improvements in existing heating plant to ensure secure heating provision and optimised energy efficiency. The Hospice provides support for over 400 families and includes access not only to accommodation but also a multi-sensory room, art room, hydrotherapy pool and jacuzzi.

Works included the replacement of existing Strebel Cast Iron sectional boilers and removal of existing flue to allow a cascade flue header to be installed connecting three Strebel S-CB+180 wall hung boilers. Also included in the install was a Plate Heat Exchanger, Pressurisation set and a BMS system. In order to keep heating and hot water supplied to the Hospice during the project Strebel also provided temporary plant to ensure uninterrupted heating and hot water.

“

We enlisted the services of Strebel as we knew the reliability of their equipment. They fully managed our needs and expectations, and the system is working perfectly and as expected. We will see significant savings in Gas as the new boilers will work in a much more efficient way.

”

Bruce Dodd, Head of Facilities & Estates
